AARAV MEHTA

SOFTWARE ENGINEER | BACKEND & API DEVELOPMENT

Meerut, India | +91-00000-00001 | aarav.mehta@example.com | github.com/sample-aarav-mehta

PROFESSIONAL SUMMARY

Software engineer focused on building reliable backend services, secure REST APIs, and data-driven web applications. Experienced with Node.js, TypeScript, PostgreSQL, and automated testing; enjoys improving performance through measurement and iterative delivery.

TECHNICAL SKILLS

Languages: TypeScript, JavaScript, Python, SQL
Backend: Node.js, Express, REST, JWT, WebSockets
Data: PostgreSQL, MongoDB, Redis
Quality: Jest, Supertest, Docker, Git, CI/CD

EXPERIENCE

Backend Engineering Intern | Northstar Labs (fictional) *May 2025 - Aug 2025*

- Built and documented 8 REST endpoints for a team collaboration service, including pagination, validation, and consistent error responses.
- Added Redis caching to frequently requested profile data; measured a 32% reduction in median response time in a local test workload.
- Wrote 35 unit and integration tests for authorization, request validation, and message retrieval paths.

Software Developer | Campus Dev Studio *Sep 2024 - Apr 2025*

- Implemented role-based access control and reusable service modules for a student project used by 120+ test accounts.
- Reviewed pull requests, resolved defects, and maintained setup documentation for a four-person development team.

Developer Projects Lead | Engineering Society *Jan 2024 - Aug 2024*

- Coordinated a three-person student team to break feature requests into issues and deliver working demos on a weekly cadence.
- Reviewed merge requests and documented API contracts so frontend contributors could integrate independently.

SELECTED PROJECTS

QueueLite - Job Queue Service
Node.js, TypeScript, PostgreSQL, Docker
Designed retry handling, job status tracking, and worker health endpoints; load-tested 500 queued demo jobs.

ChatStream - Real-time Messaging
React, Express, Socket.IO, MongoDB
Implemented authenticated rooms, message history, and reconnect handling with server-side input validation.

API Observability Kit
Express, OpenTelemetry, Jest
Added request IDs, structured logs, and basic latency measurements to simplify debugging during local test runs.

ADDITIONAL HIGHLIGHTS

- Practiced API design, authentication, and database indexing through end-to-end projects.
- Comfortable translating bug reports into minimal reproductions, tests, and reviewable fixes.
- Relevant coursework: Data Structures, Operating Systems, DBMS, Computer Networks.

EDUCATION & LEARNING

B.E. Computer Engineering | North Valley Institute of Technology | 2022 - 2026 | CGPA: 8.3/10
Foundations of Cloud Computing (course certificate) | SQL Intermediate (course certificate)
