DIYA NAIR

DATA ANALYST | PRODUCT & OPERATIONS INSIGHTS

CONTACT

Pune, India
diya.nair@example.com
+91-00000-00002
portfolio.example.com/diya-nair

CORE SKILLS

- SQL: joins, CTEs, window functions
- Python: pandas, NumPy, matplotlib
- BI: Power BI, Excel, PivotTables
- Analytics: funnel, cohort, retention
- Other: statistics, data QA, Git

LEARNING

Google Data Analytics (course certificate) | Microsoft Power BI learning path

EDUCATION

B.Sc. Statistics | Western Coast University | 2022 - 2025 | GPA: 3.6/4.0

PROFILE

Analytical graduate who turns messy operational data into clear recommendations. Comfortable with SQL, Python, Excel, and Power BI, with project experience in cohort analysis, KPI definition, data cleaning, and dashboard design.

EXPERIENCE

Data Analyst Intern | BrightCart (fictional) *Jan 2025 - Jun 2025*

- Cleaned and reconciled 45,000+ sample order rows using SQL and Python; documented missing values and duplicate-handling rules.
- Built a Power BI dashboard covering revenue, cancellation rate, repeat purchase, and category performance for weekly reviews.
- Identified a high-cancellation delivery segment and recommended a monitoring rule adopted in the team's demo workflow.

Research Assistant | Institute Analytics Cell *Aug 2024 - Dec 2024*

- Combined survey and attendance datasets, then summarized response patterns for a faculty research report.
- Created reusable Excel templates that reduced manual weekly reporting steps from about 90 minutes to 35 minutes.

Reporting Volunteer | Campus Placement Cell *Jul 2023 - Jan 2024*

- Maintained a standardized tracker for workshop registrations and attendance, with documented definitions for each KPI.
- Prepared summary charts for monthly reviews and flagged incomplete entries before reports were shared.

PROJECTS

Subscription Retention Study

SQL, Python, Power BI

Analyzed a synthetic subscription dataset by signup month and plan; compared 30-day retention across four cohorts.

Retail Demand Dashboard

Excel, Power Query

Designed an interactive dashboard with product, region, and month filters plus documented KPI definitions.

Support Ticket Trends

SQL, Excel

Grouped a synthetic ticket dataset by category and weekday to identify recurring demand peaks and reporting gaps.

ADDITIONAL HIGHLIGHTS

- Presented dashboard findings with clear metric definitions and documented assumptions.
- Used row counts, null checks, and duplicate checks to verify transformed datasets before analysis.
- Relevant coursework: Probability, Statistics, Database Systems, Business Intelligence.
