KABIR SINGH

CLOUD / DEVOPS ENGINEER | AUTOMATION & RELIABILITY

Noida, India | kabir.singh@example.com | +91-00000-00004 | github.com/sample-kabir-singh

Junior cloud and DevOps engineer interested in repeatable deployments, observability, and secure infrastructure. Hands-on with Linux, Docker, GitHub Actions, Terraform fundamentals, and cloud-hosted applications through labs and team projects.

CAPABILITIES

- Cloud: AWS EC2, S3, IAM fundamentals
- Containers: Docker, Docker Compose
- Automation: GitHub Actions, Bash, Python
- IaC & Ops: Terraform basics, Linux, Nginx
- Monitoring: Prometheus, Grafana, logs

EXPERIENCE

Cloud Engineering Trainee | BluePeak Systems (fictional) *Mar 2025 - Aug 2025*

- Containerized a three-service demo application and standardized local setup with Docker Compose and environment templates.
- Created GitHub Actions workflows to run tests and build container images on pull requests, reducing manual release steps.
- Configured health checks and basic dashboard panels to make service restarts and elevated error rates easier to diagnose.

IT Support Assistant | Campus Computing Lab *Jun 2024 - Feb 2025*

- Maintained Linux lab machines, documented recurring fixes, and automated log rotation checks with shell scripts.
- Supported account provisioning and routine updates for a lab environment shared by 80+ students.

Technical Volunteer | Open Lab Days *Jan 2023 - Aug 2023*

- Helped participants troubleshoot Linux permissions, package installation, and container startup errors.
- Maintained a quick-start checklist with verified commands for common development-environment issues.

PROJECTS

Repeatable Web App Deployment

Docker, Nginx, GitHub Actions

Built a sample pipeline with test, build, and staging stages; documented rollback and secret-management practices.

Infrastructure Lab

Terraform, AWS

Provisioned a small test environment from reusable configuration and wrote a teardown checklist to avoid idle resources.

Log Triage Helper

Python, Bash, Linux

Parsed sample application logs into grouped error counts and printed a short diagnostic summary for review.

ADDITIONAL HIGHLIGHTS

- Favors infrastructure changes that can be reviewed, repeated, and safely rolled back.
- Documents cleanup steps and avoids committing credentials or environment-specific secrets.
- Relevant coursework: Operating Systems, Computer Networks, Cloud Computing.

EDUCATION & CERTIFICATIONS

B.Tech. Computer Science | Meridian Institute of Engineering | 2021 - 2025 | CGPA: 7.9/10

AWS Cloud Practitioner Essentials (course completion) | Linux Foundation intro labs
